- ❑ No limit to the network expansion.
- ❑ No limit to the number of users and no additional fees.
- ❑ Free cloud service for remote management
- ❑ Free lifetime on-line support, free software upgrades.

All Guest Internet products have very similar software that is very easy to use. The products differ in the number of Ethernet ports, the number of WAN ports and advanced functions such as VLAN that permit cost reduction for large network installations. The software can be used as the single management interface, or combined with the Cloud system to extend management functionality for an unlimited number of devices from a single location. The standard login page is created with a few clicks of the mouse. Custom login pages can be programmed easily and an existing website code can be used to create a login page walled garden. Login pages scale for any type of device.

All software features can be accessed remotely through the WAN port so the device can be managed from anywhere on the Internet.

Guest Internet Hotspot gateways provide the quickest and simplest method to implement an Internet hotspot for any business or organization.
