

STAR-16 kit

Easy to install 5.8GHz home kit that provides a community Internet service using your ISP connection

- ❑ Everything you need in one kit to connect a home to a WISP service central 5.8GHz antenna.
- ❑ The STAR-16 kit is one of a selection of ready to use complete kits with full installation instructions, using high performance products.
- ❑ Easy self-install and management of the Internet service, you do not depend on others.
- ❑ The STAR-16 kit users can authenticate onto the Internet using a voucher with access codes that is printed by one of the STAR access point kits: the code provides duration, data speed and data limits.
- ❑ Use the GIS controller in a STAR kit to monitor the STAR-16 for failures: get alerts.
- ❑ Protection from abuse of the Internet service; prevents unauthorized Internet access.
- ❑ No other fees, maintenance, license, software, services or contracts.
- ❑ Free support, free upgrades.
- ❑ Free cloud service; manage the Internet from anywhere.
- ❑ Branding is easy to customize your Internet service.

Community Internet using your ISP: easy to install and operate

Many rural communities around the world are installing a WiFi Internet service for the residents, and connecting the service to a local ISP, or to a satellite service, such as Starlink. The central antenna will provide a WiFi service for mobile phones that are within range. Homes can connect to the central 5.8GHz antenna using the STAR-16 kit, which can connect up to 1Km distance with a clear line of sight and no obstructions between the antennas.

Provide a service to homes with the STAR-16 kit and your STAR-kit central antenna

The STAR-16 kit is a home installation kit that adds additional homes for the STAR-6, STAR-7 and STAR-8 kits. The STAR-16 kit has the components to install a home to a central antenna and includes full installation instructions.

Each STAR-16 kit has a CPE200 5.8GHz rooftop integrated wireless antenna and receiver, and a IN7620 wireless router for installation in the home to provide WiFi Internet access. The only additional item required is the Ethernet cable that connects the CPE200 on the roof to the IN7620 wireless router in the home. The products are illustrated in the figure below.

Guest Internet equipment is very easy to use so it is not necessary to rely on an expert to install the system, anyone can do it.

Two products in the STAR-16 kit

CPE200 5.8GHz client wireless receiver

Items included with the STAR-16 kit

- ❑ A pre-configured home installation kit with a CPE200 5.8GHz home rooftop antenna and IN7620 wireless router
- ❑ Extension Ethernet cable
- ❑ Complete guide, how to connect, configure and provide your Internet service
- ❑ **The ISP Internet service is not included**

The CPE200 antenna must be pointed towards the transmitting antenna and adjusted for good signal strength. The installer has to provide the Ethernet cable that connects the CPE200 on the roof to the IN7620 wireless router installed in the home.

Guest Internet features that manage the community Internet service

Easy to install and use

Comprehensive instructions and simple products mean that you do not have to depend on others to provide the Internet service

Quick
Start
guide

Control Internet use with access codes

- Duration of access
- Maximum data speed
- Maximum data use
- Number of users
- Date to be used
- + more

Easy to print
