Community Internet using ISP service: easy to install and operate

Many rural communities around the world had no hope of getting Internet access until now. The Starlink Internet operates almost everywhere in the world and can be shared with homes in a community when the Internet service is managed using a Guest Internet controller. The unique Guest Internet features maintain good Internet performance for many users while ensuring that Starlink requirements are not exceeded.

Provide a WiFi Internet service to mobile devices and homes using the STAR-15 kit and your ISP connection

When the STAR-15 kit is connected to a Starlink antenna it can provide an Internet service for several homes that have a Star-4 kit installed. The GIS-K1 WiFi Internet controller connects to the Starlink router. The powerful omni-directional AP1200F outdoor wireless access point connects to the GIS-K1. Homes within a range of 1 Km with line of sight to the AP1200F antenna can connect to the Internet using the STAR-4 home installation kit.

The GIS-K1 sets rules for Internet access so that the service from one Starlink antenna can be shared between 20 to 30 people, and to ensure that the Starlink data capacity is not exceeded which may result in a service interruption. The rules include the duration of access, maximum data speed, maximum data volume, and time at which the service can be used. Internet access is provided with a voucher that can be printed using the GIS-K1 or using the free Cloud service. The voucher access code has the rules for Internet access. Guest Internet has no other charges and the equipment is very easy to use so it is not necessary to rely on an 'expert' to operate the system, anyone can do it.

The GIS-K1 is a WiFi Internet controller with all the features that are essential to manage the Starlink Internet service for many users. The STAR-15 kit includes the powerful AP1200F outdoor wireless access point with omni-directional antenna.

Items included with the STAR-15 kit

- ❑ GIS-K1 Internet controller.
- ❑ AP1200F dual band outdoor wireless access point with omni-directional antenna and PoE power supply
- ❑ Extension Ethernet cable.
- ❑ Free Cloud account to manage the service.
- ❑ Print vouchers using the GIS-R4 or using the Cloud account.
- ❑ Complete guide, how to connect, configure and provide your Internet service.
- ❑ **The Starlink antenna is not included.**

The AP1200F omni-directional antenna is installed outdoors at a high point, such as the roof of a building. The installer has to provide the Ethernet cable that connects the AP1200F to the PoE supply.

STAR-15 community WiFi Internet kit

Guest Internet features that manage the WiFi community Internet service

Easy to install and use

Comprehensive instructions and simple products mean that you do not have to depend on others to provide the Internet service

Quick
Start
guide

Control Internet use with access codes

- Duration of access
- Maximum data speed
- Maximum data use
- Number of users
- Date to be used
- + more

Easy to print
